

## INDEX

### A

- |   |               |  |
|---|---------------|--|
| Acid rain                                 | 401, 403      |  |
| Acidic dehydration                        | 380           |  |
| Activating groups                         | 395           |  |
| Acyclic compounds                         | 331           |  |
| Alicyclic compounds                       | 331           |  |
| Alkali metals                             | 292           |  |
| – atomic radii                            | 292           |  |
| – chemical properties                     | 293           |  |
| – halides                                 | 295           |  |
| – hydration enthalpy                      | 292           |  |
| – hydroxides                              | 295           |  |
| – ionic radii                             | 292           |  |
| – ionisation enthalpy                     | 292           |  |
| – oxides                                  | 295           |  |
| – physical properties                     | 292           |  |
| – reactivity towards air                  | 293           |  |
| – reactivity towards dihydrogen           | 294           |  |
| – reactivity towards halogens             | 294           |  |
| – reactivity towards water                | 294           |  |
| – reducing nature                         | 294           |  |
| – salts of oxoacids                       | 295           |  |
| – solution in liquid ammonia              | 294           |  |
| – uses                                    | 294           |  |
| Alkaline earth metals                     | 298           |  |
| – atomic radii                            | 298           |  |
| – carbonates                              | 301           |  |
| – chemical properties                     | 299           |  |
| – electronic configuration                | 298           |  |
| – halides                                 | 301           |  |
| – hydration enthalpies                    | 299           |  |
| – hydroxides                              | 301           |  |
| – ionic radii                             | 298           |  |
| – ionisation enthalpies                   | 299           |  |
| – nitrates                                | 301           |  |
| – oxides                                  | 301           |  |
| – physical properties                     | 299           |  |
| – reactivity towards air                  | 300           |  |
| – reactivity towards halogens             | 300           |  |
| – reactivity towards water                | 300           |  |
| – reducing nature                         | 300           |  |
| – salts of oxoacids                       | 301           |  |
| – solution in liquid ammonia              | 300           |  |
| – uses                                    | 300           |  |
| – reactivity                              | 300           |  |
| – sulphates                               | 301           |  |
| Alkanes                                   | 366           |  |
| – aromatisation                           | 374           |  |
| – chain isomerism                         | 378           |  |
| – combustion                              | 373           |  |
| – controlled oxidation                    | 374           |  |
| – geometrical isomerism                   | 378           |  |
| – halogenation                            | 372           |  |
| – halogenation mechanism                  | 373           |  |
| – Isomerisation                           | 374           |  |
| – ozonolysis                              | 383           |  |
| – pyrolysis                               | 374           |  |
| – reaction with steam                     | 374           |  |
| Alkenes                                   | 376           |  |
| – addition of dihydrogen                  | 380           |  |
| – addition of hydrogen halides            | 380           |  |
| – addition of hydrogen halides, mechanism | 381           |  |
| – addition of sulphuric acid              | 382           |  |
| – addition of water                       | 383           |  |
| – chemical properties                     | 380           |  |
| – geometrical isomers                     | 378           |  |
| – oxidation                               | 383           |  |
| – physical properties                     | 380           |  |
| – position isomerism                      | 378           |  |
| – preparation                             | 379           |  |
| – structural isomerism                    | 377           |  |
| Alkynes                                   | 384           |  |
| – acidic characters                       | 386           |  |
| – addition of dihydrogen                  | 387           |  |
| – addition of halogens                    | 387           |  |
| – addition of hydrogen halides            | 387           |  |
| – addition of water                       | 387           |  |
| – addition reaction                       | 386           |  |
| – cyclic polymerisation                   | 388           |  |
| – linear polymerisation                   | 387           |  |
| – polymerisation                          | 387           |  |
| – preparation                             | 385           |  |
| Allotropes of carbon                      | 317           |  |
| Aluminium                                 | 309, 310, 314 |  |
| Aluminium, uses                           | 314           |  |
| Angle of torsion                          | 375           |  |
| Anti Markovnikov rule                     | 382           |  |
| Arenes                                    | 388           |  |
| Arenium ion, formation                    | 393           |  |
| Arenium ion, stabilisation                | 393           |  |
